

Creating a Horizontal Navigation Bar

1) Create a list of links

1. Insert an unordered list.
2. Type the text for each link as a list item
3. For each list item:
 - a. highlight the text
 - b. **For External Links:** type or copy the URL into the link box

Or

For Internal Links: in the properties window, drag the link pointer to the corresponding file name in the files panel

2) Create a class for the `ul` tag

For example, create a class style called `ul.hnavbar` and set the following properties:

```
padding: 0px  
margin: 0px  
list-style-type: none
```

3) Create a “descendent” style for the `li` tag

create a compound style called `ul.hnavbar li` set the following properties:

```
float: left  
width: 8em  
text-align: center  
border: 1px solid black
```

4) Create a “descendent” style for the `a` tag

create a compound style called `ul.hnavbar a` set the following properties:

```
display: block  
text-decoration: none  
padding-top: 3px  
padding-bottom: 3px  
background-color: your choice  
color: your choice
```

5) Create a “descendent” style for the `a: hover` tag

create a compound style called `ul.hnavbar a: hover` set the following properties:

```
background-color: your choice  
color: your choice
```
